

The Project CORAL-FLNG

MOZAMBIQUE

THE PROBLEM :

Our client wanted a turnkey maintenance workshop for the site. Several points were delicate in this mission:

- **Packaging in wooden crates** that can be stored outside
- **International logistics**, mainly in France and Asia, with 2 consolidation points, in Le Havre (FR) and in China.
- **The number of suppliers** : about 60 for 3000 items to be delivered.
- **The time of management to be respected** : 1 month from the order to the setting in cases.

OUR SOLUTIONS :

While respecting these unavoidable conditions, Soléane intervened to provide the maintenance material for the site :

- **Machine tools** : machine tools for polishing, machine tools for drilling, hydraulic folding machine...
 - **Welding equipment** : welding machines, flame welding, generator, gas bottles...
- Consumables for tooling** : manual tools, measuring instruments...

THE PROJECT IN SHORT :

✓ **CONTEXT** : as part of the ENI project for the extraction, transportation and creation of a floating gas liquefaction facility.

✓ **DELIVERY** : delivery of a maintenance workshop with machine tools, welding equipment and tools.

✓ **TECHNICITY** :

- Specific packaging
- International logistics
- 3000 items from 60 suppliers
- Management time: 1 month
